The first part of the paper is devoted to a discussion of the
 general principles of the theory of the structure of the
 crystal lattice. It is shown that the structure of the
 crystal lattice is determined by the arrangement of the
 atoms in space. The atoms are arranged in a regular
 pattern, and the distance between them is constant.
 This distance is called the lattice constant. The
 lattice constant is a measure of the size of the
 crystal lattice. It is determined by the nature of the
 atoms and the forces between them. The lattice
 constant is a function of the temperature and the
 pressure. It is a measure of the expansion and
 contraction of the crystal lattice. The lattice
 constant is a function of the temperature and the
 pressure. It is a measure of the expansion and
 contraction of the crystal lattice.
